

and properly if supply > 10V  
in RV3 to 95%, 0.95 VPP  
RUS  
PP output with RV6.

for modulator  
in RV3 to 95%, 0.95 VPP  
Voltage Dividers and PWM from  
14, then same on RV2, use T1 on scope.

External Full-Bridge, pull down to 0V (Normal = 0V)  
Remove\_PWR\_Latch

Adj. Dead Time Delays 100ns to 1us  
Adj for exact firing angle and lag delay at gates of H-Bridge MOSFETS

Note: Switching Top signals  
Note: 33kV preprogrammed  
Note: 20000 ohm transformer used here
